Overview

When your project is at a point where you need to create results in a production mode, the modules of this training will help you get your data processing up and running and under control. In order to fully take advantage of this training, the customer should have at least one eCognition Server license as well as an initial project scope and input data.

Content

eCognition Developer – Custom covers a range of topics. The content and goals of this training are tailored to the customer’s specific project needs. Typical topics are:

- Workspace automation
- eCognition Server processing & configuration
- RuleSet optimization
- Performance enhancement
- Increasing RuleSet transferability
- RuleSet to Solution – creating a production environment

Format/Price

The length of this instructor-led training depends on the customer’s needs and is available only as an in-company training (max. 5 participants). The price is available upon request (eCognition_Training@trimble.com).

Prerequisites & recommendations

We recommend that participants have a solid understanding of remote sensing and GIS procedures and components as well as familiarity with image analysis. Participants should have completed the eCognition Developer Fundamentals course or have equivalent RuleSet development experience. Each participant is responsible for bringing a laptop that meets the eCognition system requirements.

The eCognition training team will not provide input data. This must be acquired by the customer prior to starting the course. In addition, the trainer will not provide eCognition Server software for processing during this course. The customer must have acquired the appropriate licenses prior to course begin.
